IMATS™

TOTAL INMATE CONTROL™

Continuous Solid Performance From IMATS

"In January of 2001, the Berkshire County Sheriffs' Department moved from the Civil War to Star Wars when we opened our new, state-of-the-art correctional facility. But, transitioning from a 130 year old building was only part of the improvements we made. We also implemented a new, equally state-of-the-art corrections management system called IMATS™. IMATS™ stands for the Inmate Management and Tracking System and we began using the new system in 2000.

Over the past seven years, this comprehensive system has performed flawlessly for us and we have made fewer than ten calls for technical support. It just runs and runs and does the job for our professional staff. That's why I have decided, after seven years, to upgrade to the latest version of IMATS™. With that kind of performance and track record, I expect another seven years of solid performance from IMATS™."

Carmen C. Massimiano, Jr.
Sheriff of Berkshire County
Pittsfield, Massachusetts

You're an expert when it comes to running your correctional facility. We're experts at implementing technology solutions that can help you manage your operation more efficiently.

Correctional facilities are complex operations requiring comprehensive solutions. There are no simple formulas and no easy answers. We understand that, because we understand your business.

We know that corrections is a 7 day a week, 24 hour a day, 365 days a year business. We know that consistent, firm management practices, based on sound policies, procedures, and post orders, are critical to your operation.

We also know that quick access to accurate information about every inmate is essential to running a tight, safe operation. That's why BI² Technologies offers the most advanced Inmate Management and Tracking System (IMATS™) software solution available on the market today.

IMATS™ gives you Total Inmate Control™ by providing accurate information when you need it. That's because IMATS™ was designed and developed to reflect the business process of correctional facilities just like yours.

The IMATS™ system is a total solution that is inexpensive, simple to install, easy to learn, and even easier to use. And, because each module is controlled and driven by data tables that you set up, IMATS™ fits right into your existing facility and operation. Down to the smallest detail, like how you describe a bed in a dormitory area, IMATS™ adapts seamlessly to your operation. You're the expert. You know how to run your facility. IMATS™ gives you the control to manage it more effectively.

THE IMATS™ SCREENS GIVE YOU QUICK AND EASY ACCESS TO VITAL INMATE INFORMATION

IMATS™

TOTAL INMATE CONTROL™

Effective management begins with access to detailed information about every inmate in custody. The Inmate Management and Tracking System (IMATS™) gives you Total Inmate Control™. By providing the information you need to manage your population at the click of a mouse. IMATS™ meets your business needs by capturing detailed information on every inmate in your facility. IMATS™ works right out of the box. IMATS™ is designed to fit your existing business process.

IMATS™ matches how correctional facilities operate, giving you Total Inmate Control™. IMATS™ delivers that control through ten (10) software modules that work together to manage your correctional facility.

INTAKE & BOOKING

The Intake and Booking module captures all of the information you receive when an individual comes into your custody or facility. It's also designed to allow you to quickly book an individual, and continue to add information later as you receive it.

CASE MANAGEMENT

The case management module allows you to quickly and easily manage, track, and measure every aspect of an inmate's supervision, from date calculation to program participation. The module is date and event driven, with each activity or event contained in tables that you define and control. That means you can more accurately and effectively manage your facility's resources.

PROPERTY

The property module enables you to quickly seize, store, track, locate, and dispose of all property, including cash, that is taken away from an individual. This module creates the necessary receipts, as well as the tags required to complete property processing.

SECURITY

Security, after all, is what running a correctional facility is all about. The security module is integrated with all of the other functions within the IMATS™ software solution. From counts to incident reporting, the security module gives you Total Inmate Control™.

HOUSING

The housing module allows you to easily assign, track, and manage bed locations for inmates. In conjunction with other modules, such as scheduling, it is an integral part of the count operation. It includes complete management tools for conducting capacity analysis for the facility based on bed/cell availability and projected changes and release.

SCHEDULING & MOVEMENT

The scheduling and movement modules allow you to plan, schedule, coordinate, track, and manage all internal and external events, activities, and appointments for every inmate. It helps you schedule and coordinate personnel and transportation resources. And, most importantly, the module is driven by tables that you define based on your policies, procedures, and post orders. This gives you total control of scheduling and movement for every inmate and resource in your facility.

CLASSIFICATION

The classification module allows you to quickly analyze, track, and manage inmate status, behavior, and treatment needs and requirements. The classification module is not based on any one methodology (i.e., subjective versus objective). Rather its flexible, table-driven design allows you to easily automate your existing classification process or modify it, as you deem appropriate. The IMATS™ classification module is based on your rules, policies, and procedures.

VISITS

The visits module allows you to capture, store, monitor, schedule, and most importantly, control all visits in strict accordance with your facility's policies and procedures. The visits module also allows you to effectively control every individual who is visiting the facility or an inmate.

REPORTS

IMATS™ comes complete, right out-of-the-box, with a comprehensive selection of standard reports. More importantly, IMATS™ has a report building tool set that allows you to create, without high-priced programmers, customized reports that find, analyze, and present information when you need it.

ADMINISTRATION

The administration module allows you to control and customize how IMATS™ operates. You can customize the data tables that describe every component of your operation, from offense codes to good time credits. You also decide who can use the system, how much of the software they can use, and what information they have access to. The administration module gives you total control of how IMATS™ works in your facility.

IMATS™

TOTAL INMATE CONTROL™

POWERFUL CORRECTIONAL MANAGEMENT SOFTWARE

IMATS™ is the perfect correctional management software for your jail or correctional facility. IMATS™ runs on common industry technologies such as Windows 2000 and XP, Windows NT and Novell, and the Microsoft SQL Server or Oracle databases. IMATS™ is a powerful but easy to use solution that costs less to buy, operate, and maintain. These are the application solution technologies that you need for Total Inmate Control™ in your facility.

Because IMATS™ is a powerful tool based on open system standards, we can readily integrate existing technologies such as Photo Image, Fingerprint Identification, DNA Tracking, Canteen/Commissary and Property Management Systems. We also offer our own Iris Bio-Metric Recognition Modules, which provide the quickest and most accurate method for identification available today; ensuring that you will never release the wrong inmate.

IMATS™ CAN GIVE YOU TOTAL INMATE CONTROL™

To learn more about how IMATS™ can give you Total Inmate Control™, visit our web site at www.BI2Technologies.com. If you'd like to discuss how IMATS™ can give you Total Inmate Control™, call us at 508-224-1600 ext. 305.

CREATED BY NATIONALLY RECOGNIZED CORRECTION EXPERTS

IMATS is available through BI² Technologies in Plymouth, Massachusetts. We have over 100 years of combined experience in corrections, criminal justice and information technology. We have worked with numerous public safety agencies across the nation in areas such as: assessing current technology and its support of business goals; planning for the use of new technologies; assisting in procuring and/or managing outside resources to deliver new technologies; and designing and implementing new technologies.

The IMATS system is a result of our experience and our understanding of the unique requirements correctional officials have in managing their facilities.
